# Create an inclusive polity by providing translation and accessibility.

Spf.io *(pronounced spiffy-oh)* is an online application that delivers **real-time captions and translations of your event** to smartphones and projectors.

# Multilingual Accessibility for Presbyteries

spf.io

> **This is the first all-in-one technology that's designed to help our gatherings be more inclusive.**

spf.io

FLEXIBLE TRANSLATION

It's easy to meet translation needs in three different ways:
1. Connect a microphone to spf.io for automatic live translation.
2. Translate prepared content with the push of a button.
3. Distribute interpretation audio through spf.io.

BUILT-IN ACCESSIBILITY

Audio livestreaming with spf.io empowers assistive listening through smartphones. Or enable captioning of spoken speech to aid those with hearing loss.

SCALE FROM 1 TO 1,000

Attendees receive translation or captioning on their own smartphones —no extra devices required. Each person visits a web URL and follows the meeting in their language.
